

Your Daily AI Copilot — Cheat Sheet

Everything from Module 2, one page. Keep this open while you work.

1 Choosing Your Copilot

Claude leans: long documents, careful drafting, PRDs, comms

ChatGPT leans: quick answers, broad lookups, brainstorming

Why you care: this slide expires — pick one for 30 days, judge it on your own work, don't re-litigate weekly.

2 The Brief (5 blocks)

Role

Who you want it to be. "Senior B2B PM."

Task

The one thing you need.

Context ← carries the weight

What it couldn't possibly know: users, constraints, what you tried.

Format

The shape you want — table, bullets, section order.

Guardrails

Length, tone, and one line that changes everything: **"ask me anything unclear before you start."**

Sweet spot: **150–300 words**. Longer isn't automatically better.

3 Four Patterns That Work

Show, don't tell

Give an example of the shape you want.

Think first

Ask it to reason before it drafts.

Set the bar

Say what "good" looks like up front.

Draft → Critique → Redraft

Ask for the 3 weakest parts, then fix those. Editors beat authors.

4 The 4-Pass PRD

1. Frame

You set it up. No AI yet.

2. Draft

It writes. Most people stop here.

3. Interrogate

"What did you assume that I didn't tell you?" — the highest-value prompt in the module.

4. Own it

You decide. The model writes; you keep the judgement.

Hand over: first draft, structure, busywork. Keep: every number, every non-goal, every tradeoff call.

No number in a success metric = guessing. Fix it before it ships.

5 Stories & Edge Cases

One thread

Keep stories, criteria, and edge cases in the same chat — context compounds.

Testable criteria

Given / When / Then, not vibes.

The prompt worth memorising

"What edge cases would embarrass us in production?"

Models are tireless, have no ego, and default to the happy path — generate 12, triage to the 3 that matter.

6 Comms Without the Dread

Brain-dump once, ugly

Don't tidy first — the mess is the context.

Reshape 3 ways

Exec (3 lines, a number not a feature) · Team (detail, credit by name) · Customer (plain, legal-safe)

4 edits before you send

Put bad news back in plainly · cut one adjective/sentence · add the one detail only you know · check every number at source

7 Guardrails: What Not to Paste

Consumer tier: may train the model unless you opt out. Business/enterprise: isolated by default. Check which one you're on.

GREEN

public, drafts, invented examples

AMBER

roadmaps, metrics — biz tier only

RED

customer data, PII, keys, NDA

Hesitate more than 3 seconds → treat it as amber. Fix for red: keep the shape, swap the names ("Customer A, 400 seats").

8 Verify Before You're the Source

Every number

Checked at source. No exceptions.

ρ Every citation

Fabricated sources look real. Open the link, or assume none.

◆ Every claim about you

It has never used your product. It will still describe a feature you never built — confidently.

Callback: hallucination isn't a bug being fixed — it's the engine working as designed.

9 Your Real Asset

The PRD is this week's output. **The prompt is the reusable asset** — save every brief that reliably works. In three months that library is worth more than any single draft.

HABITS TO DELETE

"Make it better"

vague asks get vague redrafts. Name the 3 weakest parts instead.

Stacked asks

one instruction per message lands cleaner than five at once.

Elaborate personas

a one-line role beats a paragraph of backstory.

Politeness padding

costs words, adds nothing. Be direct instead.

New chat, lost context

continuing a thread beats re-explaining everything.
