

The portfolio one-pager

One link, and one page in front of it so the link means something before anybody clicks. Page 1 is yours to fill in for Rowan. Page 2 is the same page worked through on Slotline.

THE PAGE · FIVE SLOTS, ONE SIDE OF ONE PAGE

1 · THE PROBLEM

Who, how often, what it costs. Open with the number, not with context.

2 · THE EVIDENCE

Two or three sourced claims, and one verbatim quote you did not write.

3 · WHAT IT DOES

One flow, one sentence. Not a feature list.

4 · WHAT HAPPENED

What a real person did when you handed it over in silence. Numbers, not impressions.

5 · WHAT I'D DO NEXT

The decision this settles, and the next thing you would test.

HOW I USED AI, AND WHERE I OVERRODE IT

Your three judgement lines from C.2, C.3 and C.4, in three or four sentences. Almost nobody writes this. Read as a hiring signal, it outranks the prototype.

THE LINK

☐ Opens in a **private window**

☐ **Signed out**, on a phone

☐ The one-pager opens too

☐ No employer names or internal numbers

THE THREE MINUTES · TIME IT ONCE. UNTIMED, IT RUNS TO NINE.

BEAT	TIME	WHAT YOU SAY
THE PROBLEM	0:25	Open on the number. No context, no company backstory.
THE EVIDENCE	0:30	One quote, in the user's words, not summarised into yours.
THE FLOW	1:10	Live, one task, start to finish. Longest block on purpose: the only part they cannot get from a document.
WHAT HAPPENED	0:30	"Four of six found it. Two did not, and here is what they did instead."
WHAT NEXT	0:25	The part that makes you sound like a PM rather than a hobbyist.

- the tour: 12 screens in build order
- "it's only a prototype, sorry"
- reading the page aloud
- no fallback recording
- "Prototype. Fake data." said once

Worked example

The same five slots, filled in on Slotline, the scheduling tool from the course. Your capstone is Rowan: the shape is what transfers, not the content.

1 · THE PROBLEM

Ops coordinators at 50–200 person companies book cross-team meetings **8–12 times a week**, and each one takes **3 to 4 message round-trips** because availability lives in three places. At 9 minutes of coordination per booking, that is **roughly 80 minutes a week** per coordinator, spent entirely on scheduling.

2 · THE EVIDENCE

11 interviews with coordinators (Aug 2026); 9 described the same three-places problem unprompted. Two competitor tools solve it for *calendar-connected* invitees only — their own pricing pages say so. "I've started just booking a placeholder and apologising later. It's faster than asking." — P7 One dissenter, P4, has a connected calendar across her whole org and does not have this problem at all.

3 · WHAT IT DOES

One screen: pick the people, see the overlap across all three sources, send one request — without any invitee needing an account.

4 · WHAT HAPPENED

6 people, one task, no narration. 4 of 6 sent a valid request in under 90 seconds. The 2 who failed both looked for "send" in the header first, then gave up on the empty-week state, which said only "No data".

5 · WHAT I'D DO NEXT

Rewrite the empty state to offer the nearest week that works, then re-run with 6 more coordinators. The decision this settles: whether the no-account path is usable at all. It is — but not from the header.

HOW I USED AI, AND WHERE I OVERRODE IT

Claude drafted the PRD from my research brief and invented a persona, "enterprise IT admin", who appears in none of my transcripts — cut. Perplexity gave me a market-size figure with no source behind it; I dropped the claim rather than dress it up. In synthesis it merged two themes that had one participant each: I split them and killed the weaker one, which would have put calendar sync in scope. And Lovable added a pricing page and a sign-up twice after I fenced them out. The empty-state wording was mine, and it was the thing that failed.

Same artifact, three readers. Only the **first line** and the **ask change** — never the evidence.

HIRING MANAGER

Can they own a problem end to end?

First line: the problem. Ask: happy to walk you through how I built it.

YOUR VP

Is this worth a sprint?

First line: the decision it settles. Ask: a decision, not applause.

YOUR TEAM

What am I being asked to build?

First line: the flow. Ask: a spec review on Thursday.

THE THREE MINUTES, WRITTEN OUT · SAY IT ONCE WITH A TIMER BEFORE YOU SAY IT TO ANYONE

0:00 – 0:25	"Ops coordinators lose about 80 minutes a week booking meetings across three calendars. Eleven of them told me the same thing."
0:25 – 0:55	"One of them put it like this — <i>I've started just booking a placeholder and apologising later. It's faster than asking.</i> "
0:55 – 2:05	Share the screen. Do the task live: pick four people, read the overlap, send one request. Say nothing that is not on the screen.
2:05 – 2:35	"I gave it to six coordinators cold. Four sent a valid request in ninety seconds. The two who failed both looked in the header, then hit an empty state that said <i>No data.</i> "
2:35 – 3:00	"So the no-account path works, but not from the header. Next I'd rewrite the empty state and re-run it. Prototype, fake data — happy to walk through how it was built."
